- Nacos Spring Boot 工程
 - https://github.com/nacos-group/nacos-spring-boot-project/

上次分享翻车事故回顾

Nacos 模块结构

- common
 - o core
 - config
 - naming
 - console

Nacos 功能迁移

Spring WebMVC -> Spring Boot

日志问题回顾

- Spring Web MVC (手动组装)
 - o Spring Boot (自动装配,默认规则)
 - slf4j-api
 - Logback (默认的)
 - Log4j 2.x (自定义)
 - Log4j 1.x (将被移除)

Logback 配置文件加载时机

- Spring Boot 先加载
 - config (nacos-config-logback.xml)
 - naming (naming-logback.xml)
 - console = config + naming (nacos-logback.xml)
- 自定义实现先加载
 - o Loguti1 类被 ClassLoader 加载,那么 Logback 配置将会生效

利用 Spring Boot 生命周期,一并解决上述问题

- logback 配置片段化
- Spring Boot 事件机制
- startup.sh -m standalone -> -Dnacos.standalone=true -> Spring Profile -> "standalone"
 - o Console
 - o File
- com.alibaba.nacos.core.listener.LoggingSpringApplicationRunListener (最高优先级)
 - O META-INF/logback/nacos.xml
 - core
 - META-INF/logback/nacos-included.xml
 - config
 - naming
- org.springframework.boot.context.event.EventPublishingRunListener 发送事件 (中间优先级)
- org.springframework.boot.context.logging.LoggingApplicationListener 监听事件
 - Logback
 - o Log4j2
 - Java Logging

Spring Boot 加载日志核心组件

Nacos 默认端口设置设计

common

- core (默认:8848,可覆盖,如:9090)
 - o config
 - naming
 - console

默认值:没有值的选择,最低有优先级次序

- application.properties (No.11)
- nacos-default.properties(MIN) addLast

java -jar -Dnacos.server-addr=127.0.0.1:8848 agentlib:jdwp=transport=dt_socket,server=y,suspend=n,address=9527

curl -X POST "http://127.0.0.1:8848/nacos/v1/cs/configs?dataId=properties-data-id&group=DEFAULT G ROUP&content=server.port=12345"

 $curl - X \ POST \ "http://127.0.0.1:8848/nacos/v1/cs/configs?datald=pojo-data-id\&group=DEFAULT \ GROUP \\ \&content=id=9527"$

Spring Framework 5 stars

Spring Boot 4 stars

Spring Cloud 2.5 stars

Reactor

- Spring Framework 5.x WebFlux
- Spring Cloud 2.0 Gateway (Netty)

Netflix Zuul2 (Netty)

Apache Tomcat 8.x+ (NIO)

国内(中国大陆)强项解决问题,人多(劳动力多、智慧多)

创造力不够(自以为是、知识面不够)、细节设计不足(时间)
